## ***Introducing Antioxidant Infusion, Newest Component of the Skin Amnesty® Anti-Aging Skin Care System***

Employing Bioactive Modulators®, Infusion delivers intense antioxidant treatment and essential fatty acids to skin's lipid layer

### **What it is:**

A Skin Amnesty® treatment with a light touch and scent, Infusion targets the lipid layer where cellular anti-oxidants are located. By restoring essential fatty acids to the lipid layer, it strengthens the skin at the cellular level, returning the skin to its pre-damaged state. Used in conjunction with Skin Amnesty® core therapy products, diminishes the appearance of facial trouble areas associated with inflammation and aging.

### **Active ingredients:**

The infusion is composed of Indian Walnut Oil, Macadamia Nut Oil and Vitamin E in a blend of Chamomile, a powerful anti-irritant, and Neroli, effective as an anti-bacterial and anti-irritant. Gentle enough for use with sensitive or acne-prone skin.

### **How it works:**

Due to its small molecular size, the infusion penetrates the lipid layer of the skin, protecting it from future damage. The infusion decreases inflammation while performing its protective task.

###

*Launched in 2005, Skin Amnesty® is a new and revolutionary skin care line exclusively formulated with Bioactive Modulators®. Rich with anti-oxidants and anti-inflammatories, Bioactive Modulators® stimulate collagen production and prevent collagen breakdown to ultimately diminish the appearance of fine lines and wrinkles. Skin Amnesty® with Bioactive Modulators® fulfills the growing demand for visible anti-aging results without cosmetic surgery.*
